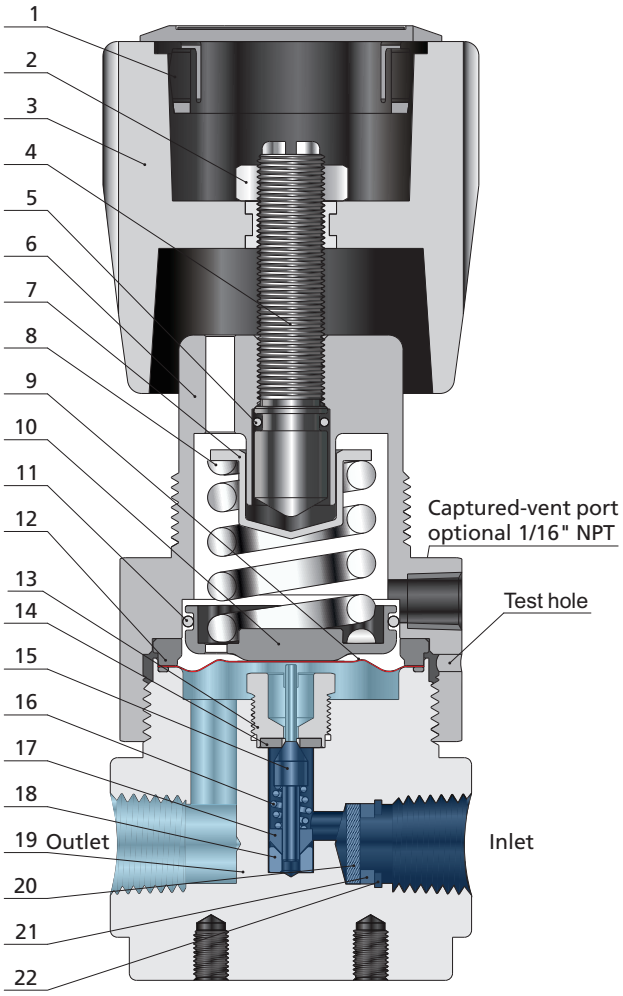
BPR-3 Series Back Pressure Piston Regulators A-74

General Introduction

Typical Construction

Diaphragm Regulators

A pressure reducing regulator is positioned where the high pressure of a medium needs to be reduced and maintained to a lower and stable level. By turning the adjustment handle, the tension of range spring would be changed so as to control the outlet pressure of the regulator.



Component		Material/Specification
1	Hole Plug	ABS
2	Stem Nut	C36000/ASTM B16
3	Knob Handle	ABS
4	Stem	C36000/ASTM B16
5	O-ring	Buna-N
6	Bonnet	304 SS/ASTM A479 or Brass
7	Spring Button	304 SS/ASTM A276
8	Range Spring	Alloy
9	Diaphragm	Hastelloy
10	Spring Plate	Aluminium alloy
11	O-ring	Buna-N
12	Seal Ring	304 SS/ASTM A479
13	Seat Retainer	316L SS/ASTM A276
14	Seat	PCTFE/ASTM D1430
15	Lift Poppet	316L SS/ASTM A276
16	Poppet Spring	Alloy X-750
17	Poppet Damper	PTFE/ASTM D1710
18	Friction Sleeve	316L SS/ASTM A276
19	Body	316L SS/ASTM A479 or Brass
20	Filter	316L SS
21	Filter Ring	PTFE/ASTM D1710
22	Retaining Ring	316L SS

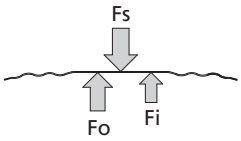
Features

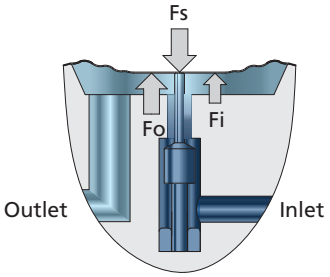
- ◎ Convoluted diaphragm to provide accurate pressure adjustment
- ◎ Spring loaded
- ◎ 316L SS filter installed at inlet
- ◎ Some regulators are fitted with captured-vent, such as FCR-1S, FLR-3 and FLR-5 series and self-venting FCR-2 and FLR-2 series
- ◎ Users can connect the captured vent port so that the media can be contained or redirected if self-vented or the diaphragm accidentally breaks
- ◎ Optional sealing material for different gases and purity class
- ◎ Hastelloy diaphragm to provide higher burst pressure and corrosion resistance
- ◎ Low leak rates
  Internal: $\leqslant 1x10^{-7}$ mbar·l/s helium
  External: $\leqslant 1x10^{-9}$ mbar·l/s helium

When the regulator is in operation, the inlet pressure (Fi) plus the out pressure (Fo) should be equal to the downward force on the diaphragm by the compressed spring (Fs), namely Fi+Fo=Fs to reach an equilibrium.

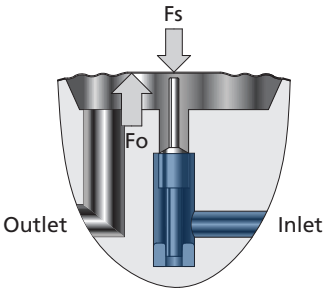
When the outlet pressure (Fo) is lower than the set pressure, the poppet would be pushed away from the seat by the excess downward force , allowing more high pressure gas to enter the chamber so as to increase the outlet pressure.

As soon as the outlet pressure (Fo) exceeds the set pressure, the excess upstream force shall lift the poppet back to the seat to limit high pressure gas entering, so as to reduce the outlet pressure.





Fs > Fo+Fi

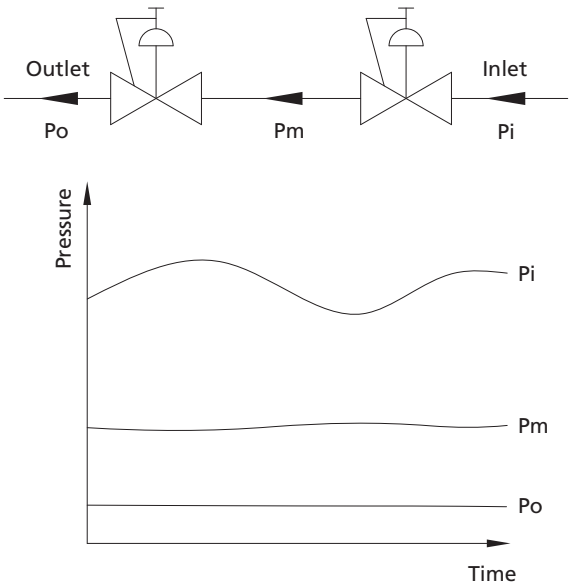


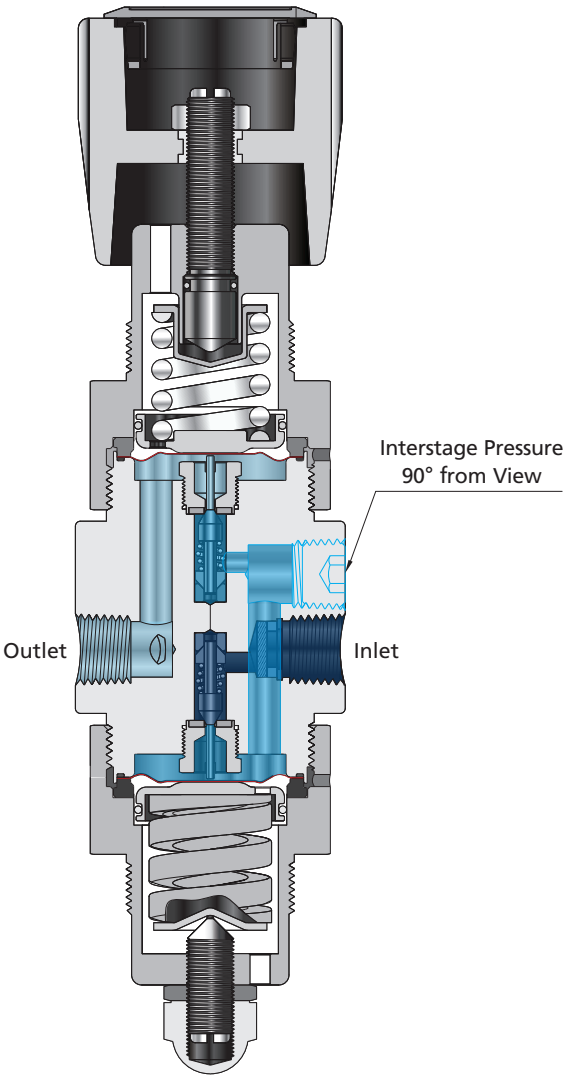
Fs < Fo+Fi
(in this figure, inlet pressure doesn't act on diaphragm)

Dual-stage Diaphragm Regulators

When the inlet pressure (Pi) decreases, the outlet pressure (Po) shall increase. Even though the increase may not be significant, the dual-stage regulator would be a better option when more stable pressure required, and the upstream pressure fluctuates violently.

The function of a dual-stage regulator is similar to that of two single-stage regulators in series. The 1st-stage regulator reduces the inlet pressure to an intermediate level for the 2nd-stage regulator to adjust to a constant output, which at the most extent ensures the stability of the outlet pressure.

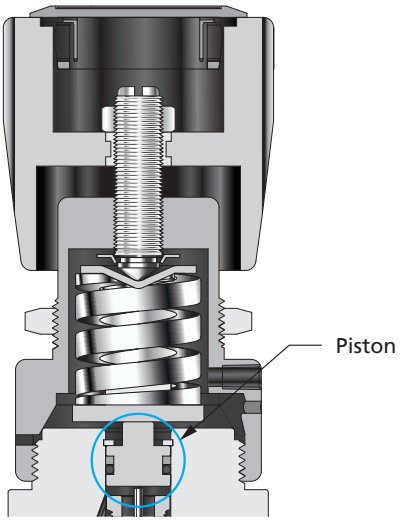




Piston Regulators

Although diaphragm regulators have many advantages such as precision, sealing effect, cleanliness and etc., in order to ensure sensitivity, the structural strength of the diaphragm regulators is low so as not being able to withstand high pressure. Therefore, it is recommended to utilize the piston regulators for high pressure applications.

A piston regulator has the same working principle as a diaphragm regulator. The key distinction is that the diaphragm is changed to a piston to satisfy the needs for high pressure applications. The inlet pressure of a piston regulator can reach 6000 psig. Its construction is simple and reliable with multiple options of O-rings to fulfill the various requirements of different media.



Series of Products

Cylinder Pressure Regulators (FCR)

Cylinder pressure regulators are designed to reduce the pressure of the cylinders to a lower level. The regulator is connected to the cylinder normally through a cylinder connection.

Line Pressure Regulators (FLR)

Line pressure regulators are used to further control the pressure in line.

Pressure Control Panels (FSR)

Pressure control panels are installed in the gas storage area (cylinder stock room or gas cabinet). They reduce cylinder or tank pressure to the desired line pressure for in-house use. Via the subsequent piping system, the gas will be guided to the point-of-use.

Changeover Systems (FDR)

There are manual changeover system and automatic changeover system.

Manual changeover system can connect with several independent gas sources at a time. When one gas source is depleted, it could be switched to another source quickly through a shutoff valve.

Automatic changeover system is installed onto gas pipelines which need continuous gas supply. It can connect with two independent gas sources at a time. When the gas source from one side is depleted, it can automatically switch to the gas source from the other side. Subsequently, replacing the exhausted gas source.

Point-of-use Panels (FPR)

Its function is to most precisely regulate the pressure and shut off at the point-of-use.

Cylinder Pressure Regulators

FCR-1 Series General Diaphragm Regulators

Features

◎ Metal-to-metal seal to minimize external leak
◎ Convoluted diaphragm design to improve regulation precision and cycle life
◎ Applicable to corrosive or toxic gases
◎ With special cleaning and packaging, applicable to oxygen-enriched environments
◎ Adjustable relief pressure
◎ 20 μm filter installed at inlet

Model: FCR-16L-30-100-C330-B-B-00-R-P

Technical Data

◎ Single-stage regulator
◎ Maximum inlet pressure: 3000 or 4500 psig
◎ Outlet pressure range: 0~25, 0~50, 0~100, 0~250 or 0~500 psig
◎ Material of the internal components:
Seat: PCTFE
Diaphragm: Hastelloy
Filter: 316L
◎ Temperature: -40°F~+165°F (-40°C~+74°C)
◎ Leak rates:
Internal: ⩽1x10^{-7} mbar·l/s helium
External: ⩽1x10^{-9} mbar·l/s helium
◎ Flow coefficient (Cv): 0.06
◎ Weight (regulator only): ≈1.98 lbs (0.9 kg)
◎ Body ports: 1/4" female NPT for inlet, outlet, gauge and relief valve

Cylinder Pressure Regulators

FCR-1S Series Sensitive Diaphragm Regulators

Features

- ◎ Large diameter convoluted diaphragm to increase pressure sensitivity and minimize pressure drop
- ◎ Fitted with captured vent as standard
- ◎ 316L SS and Brass available for valve
- ◎ With special cleaning and packaging, applicable to oxygen-enriched environments
- ◎ Die spring for stable outlet pressure
- ◎ 20 μm filter installed at inlet

Model: FCR-1S6L-30-50-C580-B-B-00-R-P

Technical Data

- ◎ Single-stage regulator
- ◎ Maximum inlet pressure: 3000 or 4500 psig
- ◎ Outlet pressure range: 0~25, 0~50, 0~100, 0~150 or 0~200 psig
- ◎ Material of the internal components:
  Seat: PCTFE
  Diaphragm: 316L
  Filter: 316L
- ◎ Temperature: -40°F~+165°F (-40°C~+74°C)
- ◎ Leak rates:
  Internal: $\leqslant 1x10^{-7}$ mbar·l/s helium
  External: $\leqslant 1x10^{-9}$ mbar·l/s helium
- ◎ Flow coefficient (Cv): 0.06
- ◎ Weight (regulator only): ≈2.87 lbs (1.3 kg)
- ◎ Body ports: 1/4" female NPT for inlet, outlet, gauge and relief valve

Cylinder Pressure Regulators

FCR-2 Series High Pressure Piston Regulators

Features

- For high pressure applications
- Robust piston-sensed design to ensure safety and reliability
- 316L SS or Nickel-plated Brass body optional
- For non-corrosive gases (due to seal limit)
- With special cleaning and packaging, applicable to oxygen-enriched environments
- Venting model available
- 20 μm filter installed at inlet

Model: FCR-26L-45-750-DIN8-B-B-00-P-P

Technical Data

- Single-stage regulator
- Maximum inlet pressure: 4500 or 6000 psig
- Outlet pressure range: 0~750, 0~1500 or 0~2500 psig
- Material of the internal components:
  Main Seat: PCTFE (PEEK for Venting Model)
  Vent Seat: PCTFE
  Piston: 316L
  O-ring: Viton or Kalrez
  Filter: 316L
- Temperature: -15°F~+165°F (-26°C~+74°C)
- Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- Flow coefficient (Cv):
  Without vent: 0.06
  Vent: 0.1
- Weight (regulator only): ≈1.98 lbs (0.9 kg)
- Body ports: 1/4" female NPT for inlet, outlet and gauge

Cylinder Pressure Regulators

FCR-1D Series Dual-stage Diaphragm Regulators

Features

◎ Compact design
◎ Dual-stage pressure reducing construction to provide accurate and stable pressure
◎ 20 μm filter installed at inlet
◎ With special cleaning and packaging, applicable to oxygen-enriched environments

Model: FCR-1D6L-30-100-C660-B-B-00-R-P

Technical Data

◎ Maximum inlet pressure: 3000 or 4500 psig
◎ 1st stage outlet pressure range: 480~500 psig
2nd stage outlet pressure range: 0~25, 0~50, 0~100, 0~150, 0~250 psig
◎ Material of the internal components:
Seat: PCTFE
Diaphragm: Hastelloy
Filter: 316L
◎ Temperature: -40°F~+165°F (-40°C~+74°C)
◎ Leak rates:
Internal: ⩽1x10^{-7} mbar·l/s helium
External: ⩽1x10^{-9} mbar·l/s helium
◎ Flow coefficient (Cv): 0.05
◎ Weight (regulator only): ≈3.3 lbs (1.5 kg)
◎ Body ports: 1/4" female NPT for inlet, outlet, gauge and relief valve

Line Pressure Regulators

FLR-1 Series Compact Diaphragm Regulators

Features

◎ Similar to FCR-1 Series Regulators with larger orifice to provide higher flow capacity
◎ Three porting configurations available
◎ 316L SS body for corrosive or toxic gases,
Nickel-plated Brass body for non-corrosive gases
◎ With special cleaning and packaging, applicable to
oxygen-enriched environments
◎ Configuration with filter installed at inlet as standard
◎ Panel mounted or installed with screw at the bottom

Model: FLR-16L-15-100-00-00-Z

Technical Data

◎ Single-stage regulator
◎ Maximum inlet pressure: 500 or 1500 psig
◎ Outlet pressure range: 0~25, 0~50, 0~100 or 0~250 psig
◎ Material of the internal components:
Seat: PCTFE
Diaphragm: Hastelloy
Filter: 316L
◎ Temperature: -40°F~+165°F (-40°C~+74°C)
◎ Leak rates:
Internal: ≤1x10^{-7} mbar·l/s helium
External: ≤1x10^{-9} mbar·l/s helium
◎ Flow coefficient (Cv): 0.14
◎ Weight (regulator only): ≈1.98 lbs (0.9 kg)
◎ Body ports: 1/4" female NPT for inlet, outlet and gauge

Line Pressure Regulators

FLR-2 Series Piston Regulators

Features

- ◎ Applicable to non-corrosive gases or low-viscosity liquids
- ◎ Easy to assemble and disassemble, convenient replacement of springs with different output ranges
- ◎ Robust piston-sensed design to provide safety and reliability
- ◎ With special cleaning and packaging, applicable to oxygen-enriched environments
- ◎ Three porting configurations available
- ◎ Panel mounted or installed with screws at the bottom

Model: FLR-2SS-45-1000-00-00-Z

Technical Data

- ◎ Single-stage regulator
- ◎ Maximum inlet pressure: 3000 or 4500 psig
- ◎ Outlet pressure range: 0~250, 0~500, 0~750 or 0~1000 psig
- ◎ Material of the internal components:
  Main Seat: PCTFE (PEEK for Venting Model)
  Vent Seat: PCTFE
  Piston: 316L
  O-ring: Viton or Kalrez
  Filter: 316L
- ◎ Temperature: -15°F~+165°F (-26°C~+74°C)
- ◎ Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- ◎ Flow coefficient (Cv):
  Without vent: 0.06
  Vent: 0.1
- ◎ Weight (regulator only): ≈1.98 lbs (0.9 kg)
- ◎ Body ports: 1/4" female NPT for inlet, outlet and gauge

Line Pressure Regulators

FLR-3 Series Medium Flow Diaphragm Regulators

Features

- For high inlet pressure applications
- Balanced poppet
- With large orifice to minimize outlet pressure change when inlet pressure reduces
- Large diameter convoluted diaphragm to increase pressure sensitivity
- 316L SS body for corrosive or toxic gases, Brass body for non-corrosive gases
- With special cleaning and packaging, applicable to oxygen-enriched environments
- Three porting configurations available
- Panel mounted or installed with screws at the bottom
- Fitted with captured vent as standard

Model: FLR-3SS-30-100-04-04-Z

Technical Data

- Single-stage regulator
- Maximum inlet pressure: 500 or 3000 psig
- Outlet pressure range: 0~25, 0~50, 0~100, 0~150 or 0~200 psig
- Material of the internal components:
  Seat: PCTFE
  Diaphragm: Hastelloy
- Temperature: -40°F~+140°F (-40°C~+60°C)
- Leak rates:
  Internal: Bubble-tight
  External: $\leqslant 1x10^{-9}$ mbar·l/s helium
- Flow coefficient (Cv): 1.0
- Weight (regulator only): ≈3.53 lbs (1.6 kg)
- Body ports: 1/2" female NPT for inlet, outlet
  1/4" female NPT for gauge

Line Pressure Regulators

FLR-5 Series High Flow Diaphragm Regulators

Features

- ◎ Suitable for low pressure and high flow applications
- ◎ Large diameter convoluted diaphragm to increase pressure sensitivity
- ◎ 316L SS body for corrosive gases, and Brass body for non-corrosive gases
- ◎ Fitted with captured vent as standard
- ◎ With special cleaning and packaging, applicable to oxygen-enriched environments
- ◎ Panel mounted or installed with screws at the bottom

Model: FLR-56L-05-100-04-04-Z

Technical Data

- ◎ Single-stage regulator
- ◎ Maximum inlet pressure: 500 psig
- ◎ Outlet pressure ranges: 0~15, 0~30, 0~75, 0~150 psig
- ◎ Material of the internal components:
  Seat: PCTFE
  Diaphragm: Hastelloy
- ◎ Temperature: -40°F~+165°F (-40°C~+74°C)
- ◎ Leak rates:
  Internal: Bubble-tight
  External: ⩽1×10^{-9} mbar.l/s helium
- ◎ Flow coefficient (Cv): 1.8
- ◎ Weight (regulator only): ≈5.95 lbs (2.7 Kg)
- ◎ Body ports: 3/4"female NPT for inlet, outlet,
  1/4"female NPT for gauge

Line Pressure Regulators

FBR-1 Series Miniature Piston Regulators

Features

- ◎ Applicable to non-corrosive gases or low-viscosity liquids
- ◎ Easy to assemble and disassemble, convenient replacement of springs with different output ranges
- ◎ Robust piston-sensed design to provide safety and reliability
- ◎ With special cleaning and packaging, applicable to oxygen-enriched environments

Model: FBR-1SS-60-220-00-00-00-00

Technical Data

- ◎ Media contact materials
  Body: 316, 316L or Brass (Nickel-plated)
  Seat: PCTFE, PEEK or Vespel
  Piston: Aluminium Alloy
  O-ring: Viton, Kalrez or Buna-N
  Filter: 316L
- ◎ Operating conditions
  Maximum rated inlet pressure: 6000 psig
  Outlet pressure ranges: 0~80, 0~140, 0~220, 0~700, 0~1200, 0~1800 psig
  Temperature: -15°F~+165°F (-26°C~+74°C)
- ◎ Functional performance
  Test pressure: 150% of maximum rated pressure
  Burst pressure: 300% of maximum rated pressure
  Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- ◎ Flow coefficient (Cv): 0.06
- ◎ Weight(regulator only): 0.93 lbs (0.4 kg)
- ◎ Body ports: 1/4" female NPT for inlet and outlet

High Pressure Regulators

HPR-10 Series High Pressure Piston Regulators

Features

- 316 Stainless steel or brass body optional
- Robust piston sensed design
- Stable outlet pressure and easy tune
- 7 different outlet pressure ranges
- All pressure ranges can be vented to 0 psig
- Applicable to general gases or liquid
- Panel mountable

Model: HPR-10SSN-100-100-00-00-ZV

Technical Data

- Maximum inlet pressure:
  Stainless: 10000 psig
  Brass: 6000 psig
- Outlet pressure range: 10~500, 15~800, 15~1500, 30~2500, 50~4000, 60~6000 or 200~10000 psig
- Materials of the internal components:
  Seat: PEEK
  Piston: 316L
  O-rings: Viton or NBR
  Filter: 316L
- Temperature: -15°F~+165°F (-26°C~+74°C)
- Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- Flow coefficient (Cv): 0.06
- Weight: ≈5.75 lbs (2.6 kg)
- Body ports: 1/4" female NPT for inlet, outlet and gauge

Line Pressure Regulators

HPL-06 Series High Pressure High Flow Regulators

Features

- For high pressure and high flow applications
- Large piston sensor gives excellent sensitivity
- Balanced valve design ensures stable downstream pressure
- Three porting configurations available
- Panel mounting available
- With special cleaning and packaging, applicable to oxygen-enriched environments

Model: HPL-06SS-45-1000-04-04-Z

Technical Data

- Maximum inlet pressure:
  Stainless steel: 4500 psig
  Brass: 3750 psig
- Outlet pressure ranges: 0~300, 0~600, 0~1000, 0~1500 psig
- Material of the main components:
  Body: 316 SS or brass
  Seat: PCTFE
  Piston: 316L
  O-rings: Viton or Kalrez
- Temperature: -15°F~+220°F (-25°C~+104°C)
- Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- Flow coefficient (Cv): 2.0
- Weight (regulator only): ≈ 6.25 lbs (2.83 Kg)
- Body ports: 1/2" female NPT for inlet, outlet,
  1/4" female NPT for gauge

Pressure Control Panels

FSR-1 Series Pressure Control Panels for Single Cylinder

Features

- ◎ With a FCR-1 Series Regulator
- ◎ Maximum inlet pressure up to 4500 psig
- ◎ With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- ◎ Anodized Aluminium panel
- ◎ Bracket mounting as standard

Model: FSR-16L-45-100-00-B-B-00-R-P

Technical Data

- ◎ Maximum inlet pressure: 3000 or 4500 psig
- ◎ Outlet pressure range: 0~25, 0~50, 0~100, 0~250 or 0~500 psig
- ◎ Material of the main components:
  Seat: PCTFE (regulator and diaphragm valve)
  Diaphragm: Hastelloy (regulator), Elgiloy (diaphragm valve)
  Diaphragm valve body: 316L
  Filter: 316L
- ◎ Temperature: -10°F~+150°F (-23°C~+65°C)
- ◎ Leak rates:
  Internal: $\leqslant 1x10^{-7}$ mbar·l/s helium
  External: $\leqslant 1x10^{-9}$ mbar·l/s helium
- ◎ Flow coefficient (regulator Cv): 0.06

Pressure Control Panels

FSR-2 Series High Pressure Control Panels for Single Cylinder

Features

- With a FCR-2 Series Regulator
- Applicable to non-corrosive gases or low-viscosity liquids
- With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- Venting model available
- Anodized Aluminium panel
- Bracket mounting as standard

Model: FSR-2Z6L-45-750-00-B-B-00-P-P

Technical Data

- Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 0~750, 0~1500 or 0~2500 psig
- Material of the main components:
  Seat: PCTFE (regulator and diaphragm valve)
  Piston: 316L
  Diaphragm: Elgiloy (diaphragm valve)
  Diaphragm valve body: 316L
  O-ring: Viton or Kalrez
  Filter: 316L
- Temperature: -10°F~+150°F (-23°C~+65°C)
- Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- Flow coefficient (regulator Cv):
  Without vent: 0.06
  With vent: 0.1

Changeover Systems

FDR-1 Series Manual Changeover System (up to 500 psig)

Features

- A small manual changeover system with a regulator similar to FCR-1 Series Regulators
- Connecting with two independent gas sources at a time, gas source selected through diaphragm valves
- Applicable to corrosive or toxic gases
- With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- Anodized Aluminium panel

Model: FDR-16L-30-500-00-B-B-01-00-R

Technical Data

- Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 0~25, 0~50, 0~100, 0~250 or 0~500 psig
- Material of the main components:

Changeover Systems

FDR-2 Series Manual Changeover System (up to 2500 psig)

Features

- A small manual changeover system with a regulator similar to FCR-2 Series Regulators
- Connecting with two independent gas sources at a time, gas sources switched through diaphragm valves
- Applicable to non-corrosive gases
- Venting model available
- Anodized Aluminium panel

Model: FDR-2VSS-45-2500-00-B-B-01-00

Technical Data

- Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 0~750, 0~1500 or 0~2500 psig
- Material of the main components:
  Seat: PCTFE (regulator and diaphragm valve)
  Piston: 316L
  Diaphragm: Elgiloy (diaphragm valve)
  Diaphragm valve body: 316L
  O-ring: Viton or Kalrez
  Filter: 316L
- Temperature: -10°F~+150°F (-23°C~+65°C)
- Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- Flow coefficient (regulator Cv):
  Without vent: 0.06
  Vent: 0.1

Changeover Systems

FDR-1L Series Automatic Changeover System without Line Pressure Regulator

Features

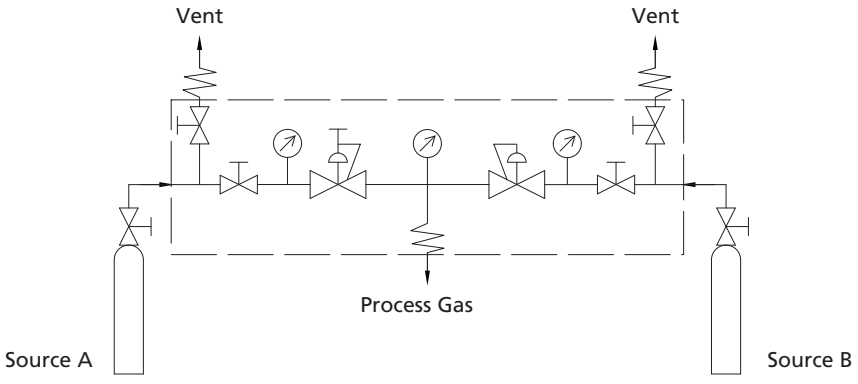
- With 2 regulators similar to FCR-1 Series Regulators
- Anodized Aluminium box with clearly marked panel
- With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- Automatic switching of gas source to ensure continuous gas supply
- Four fixed outlet pressure ranges available
- With special cleaning and packaging, applicable to oxygen-enriched environments

Model: FDR-1L6L-30-10-00-00-00

Technical Data

- Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 85~115, 135~165, 185~215 or 235~265 psig
- Material of the main components:
  Seat: PCTFE (regulator and diaphragm valve)
  Diaphragm: Hastelloy (regulator), Elgiloy (diaphragm valve)
  Diaphragm valve body: 316L
- Temperature: -10°F~+150°F (-23°C~+65°C)
- Leak rates:
  Internal: $\leqslant 1x10^{-7}$ mbar·l/s helium
  External: $\leqslant 1x10^{-9}$ mbar·l/s helium
- Flow coefficient (regulator Cv): 0.06
- Weight: ≈12.1 lbs (5.5 kg)

Flow Schematic



Operation Overview

The FDR-1L Series Changeover System is mainly comprised of one adjustable outlet pressure regulator together with one fixed outlet pressure regulator.

When the 2 inlets are both open, the one side that the "IN SERVICE" arrow is pointing at by turning the handle would be the 1st source for gas supply.

Fig. 1 When the "In Service" arrow is pointing at side B, side B would be the gas source. At this time, the fixed outlet pressure of side B is higher than the set pressure of side A. Consequently, the diaphragm of side A regulator moves to enable the stem to close the regulator.

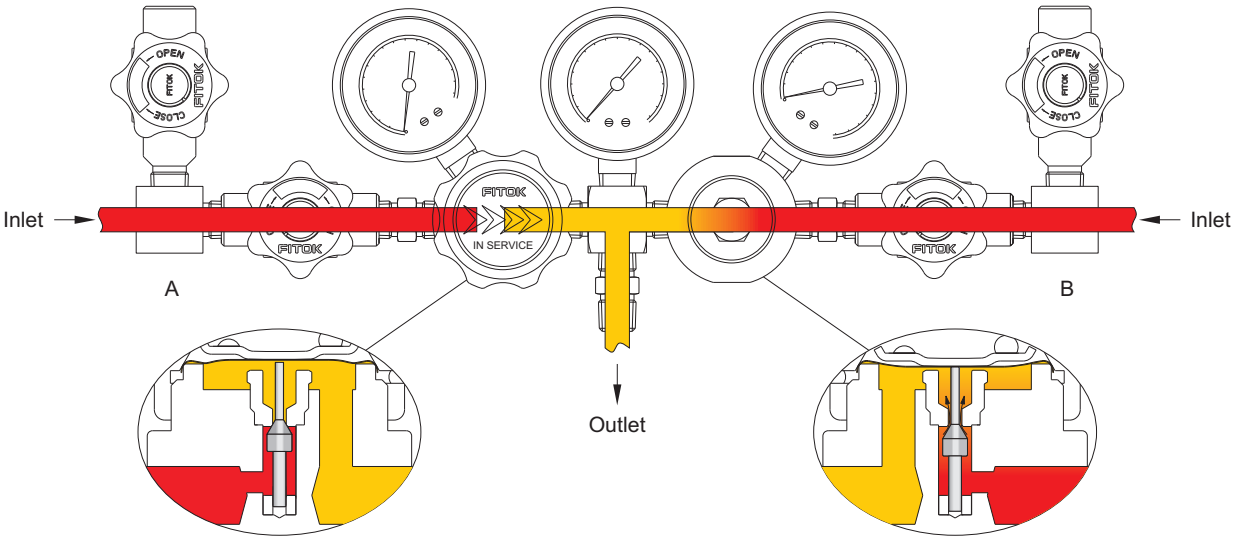


Fig. 1

Fig. 2 If side A is chosen as the gas source, the handle should be turned clockwise until the "IN SERVICE" arrow is pointing at side A. At this time, the set pressure of side A is higher than the fixed outlet pressure of side B. Consequently, the diaphragm of side B regulator moves to enable stem to close the regulator.

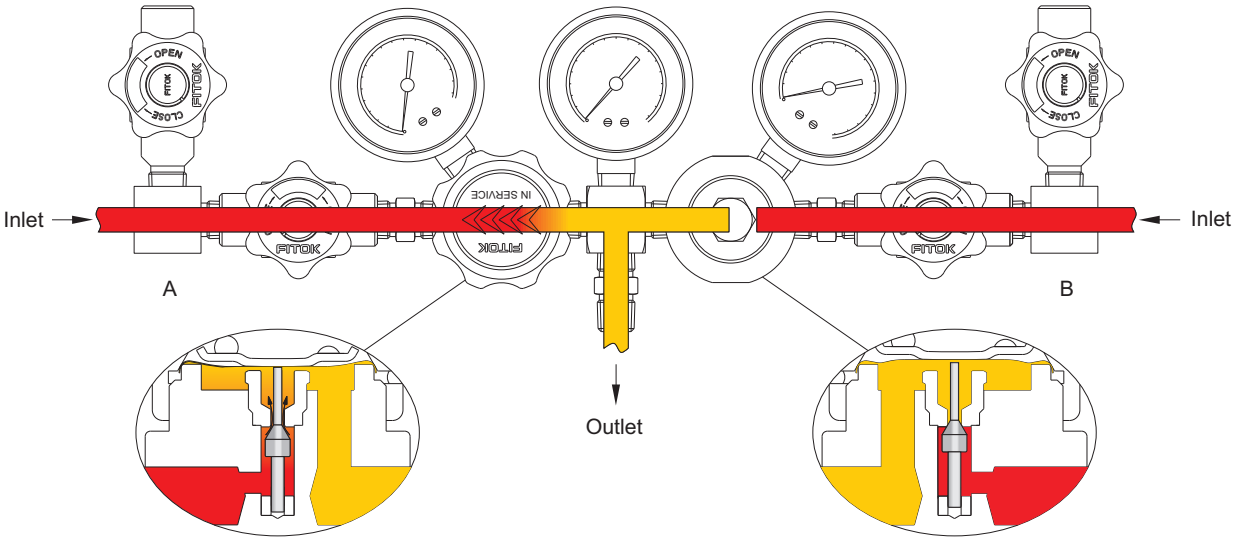

Fig. 2

When gas source of one side is depleted, gas source would automatically change to the other side.

Fig. 3 When "IN SERVICE" arrow is pointing at side B, but gas source of side B is depleted, its outlet pressure shall decrease to be lower than the set pressure of side A. By the force of spring, side A regulator will be opened to begin gas supply.

Before replacing new gas source of side B, the diaphragm valve should be turned off. Otherwise, gas from side A will flow back into side B. Then open the vent valve to exhaust the remaining pressure.

After the replacement, if the "IN SERVICE" arrow still points at side B, side B would be the gas source. If the arrow is turned towards side A, side A would thus be the gas source.

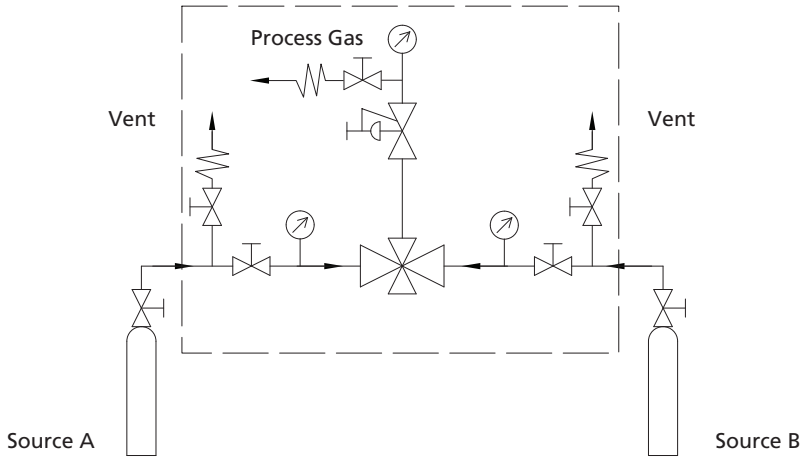
- Flow coefficient (regulator Cv): 0.05
- Weight: ≈19.6 lbs (8.9 kg)

Flow Schematic



Operation Overview

The FDR-1T Series Changeover System is mainly comprised of one adjustable outlet pressure regulator and one fixed outlet pressure regulator, together with a line pressure regulator on the outlet port.

When the 2 inlets are both open, the one side that the "IN SERVICE" arrow is pointing at by turning the handle would be the 1st source for gas supply.

Fig. 1 When the "In Service" arrow is pointing at side B, side B would be the gas source. At this time, the fixed outlet pressure of side B is higher than the set pressure of side A. Consequently, the diaphragm of side A regulator moves to enable the stem to close the regulator.

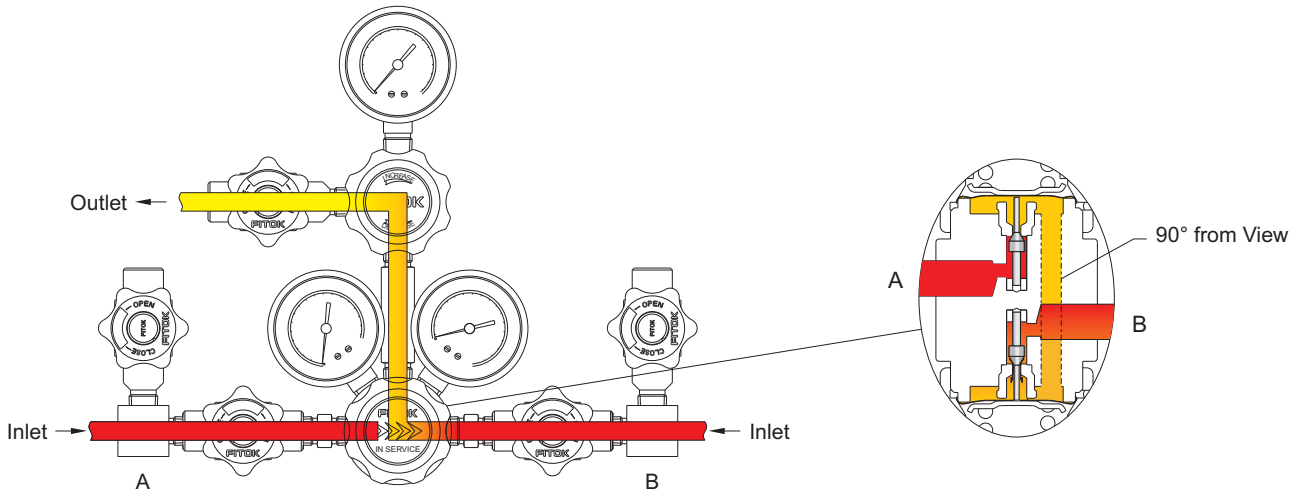


Fig. 1

Fig. 2 If side A is chosen as the gas source, the handle should be turned clockwise until the "IN SERVICE" arrow is pointing at side A. At this time, the set pressure of side A is higher than the fixed outlet pressure of side B. Consequently, the diaphragm of side B regulator moves to enable the stem to close the regulator.

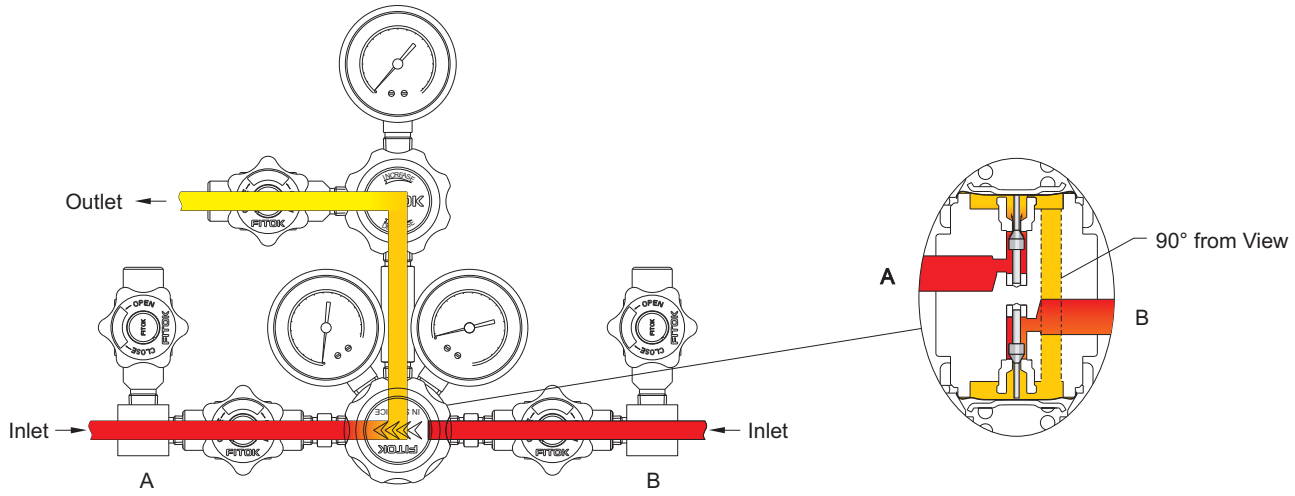

Fig. 2

When gas source of one side is depleted, gas source would automatically change to the other side.

Fig. 3 When "IN SERVICE" arrow is pointing at side B, but gas source of side B is depleted, its outlet pressure shall decrease to be lower than the set pressure of side A. By the force of spring, side A regulator will be opened to begin gas supply.

Before replacing new gas source of side B, the diaphragm valve should be turned off. Otherwise, gas from side A will flow back into side B. Then open the vent valve to exhaust the remaining pressure.

After the replacement, if the "IN SERVICE" arrow still points at side B, side B would be the gas source. If the arrow is turned towards side A, side A would thus be the gas source.

Point-of-use Panels

FPR-1 Series Compact Regulators for Low Pressure

Features

- With a FLR-1 Series Regulator
- With metal diaphragm regulators
- Shutoff valves with window to visually indicate open and closed states
- Anodized Aluminium panel, easy to install
- Regulator body of 316L SS or Brass optional
- Three configurations available

Model: FPR-1U6L-15-50-11-B-11

Technical Data

- Maximum inlet pressure: 1500 psig
- Outlet pressure range: 0~25, 0~50, 0~100, 0~250 or 0~500 psig
- Material of the main components:
  Seat: PCTFE (regulator and diaphragm valve)

Back Pressure Regulators

BPR-1 Series Back Pressure Diaphragm Regulators

Features

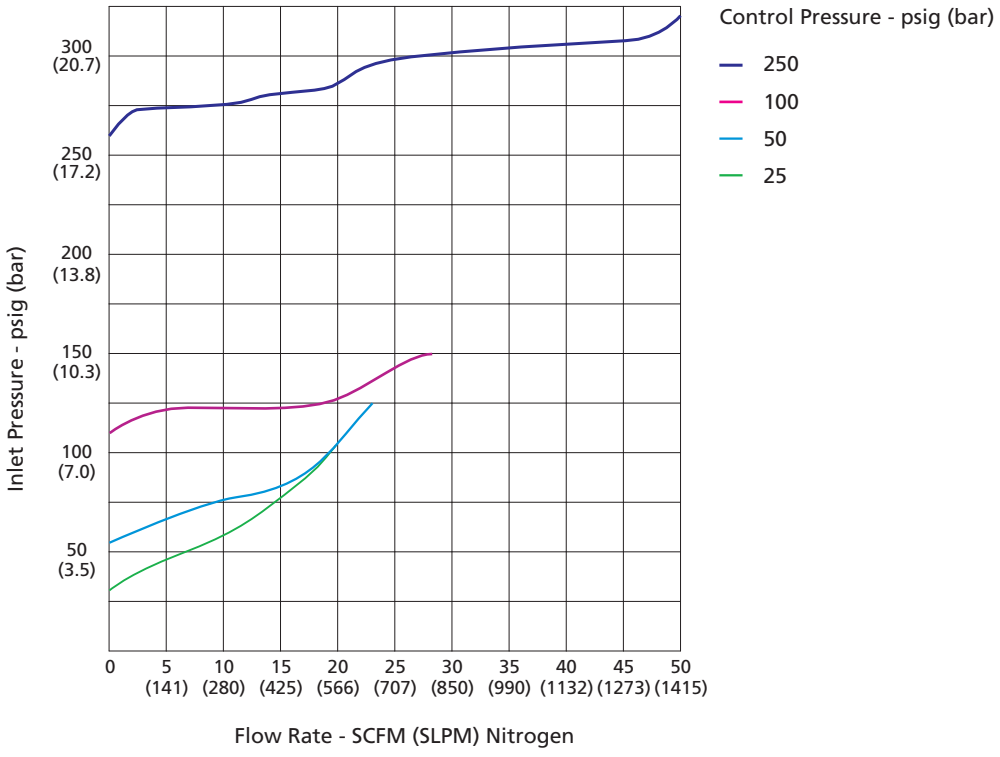
- Metal-to-metal seal with convoluted diaphragm
- Close pressure differential between crack and reseat
- Panel mounting available

Model: BPR-16L-250-00-00-Z

Technical Data

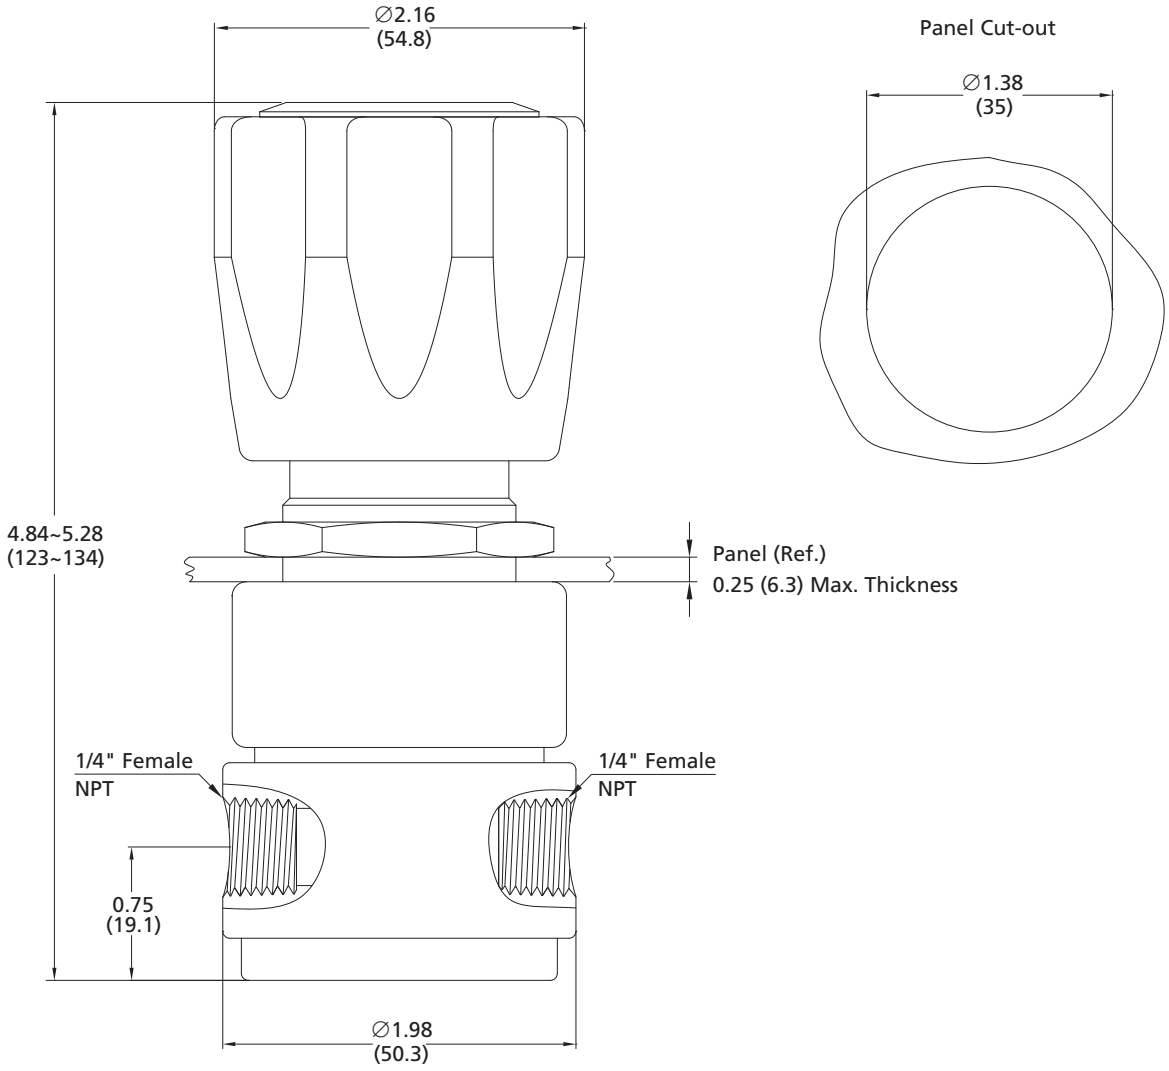
- Maximum control pressure: 250 psig
- Pressure control range: 0~25, 0~50, 0~100 or 0~250 psig
- Material of the main components:
  Seat: PCTFE
  Diaphragm: Hastelloy
- Temperature: -40°F~+140°F (-40°C~+60°C)
- Leak rates:
  Internal: Bubble-tight
  External: $\leqslant 1x10^{-9}$ mbar · l/s helium
- Flow coefficient (Cv): 0.3
- Weight: ≈1.98 lbs (0.9 kg)
- Body ports: 1/4" female NPT for inlet, outlet and gauge

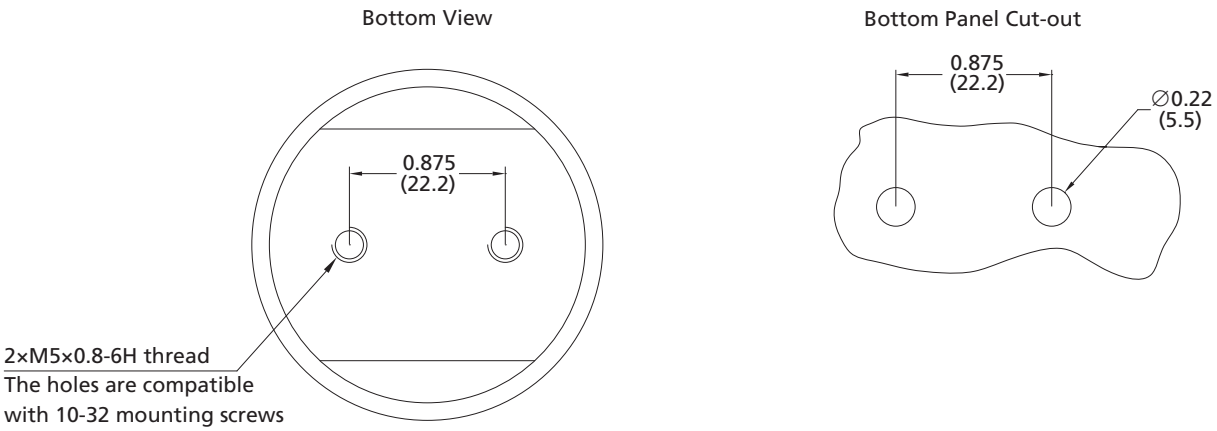
Typical Flow Chart



Dimensions

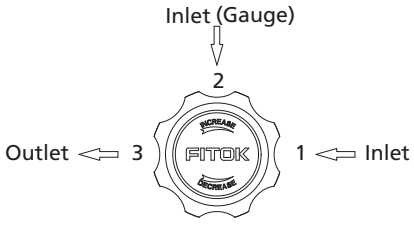
Dimensions, in inches (millimeters), are for reference only.





Port Configurations

2-Port Type



3-Port Type

Typical Application

When the system pressure is lower than the set pressure, the diaphragm obstructs the flow by the force of spring. When the system pressure is higher than the set pressure, the diaphragm compresses the inner spring to connect the flow so as to allow the fluid to pass through the back pressure regulator to keep the pressure of the Storage Vessel stable.

Back Pressure Regulators

BPR-2 Series Back Pressure Piston Regulators

Features

- ◎ Durable piston-sensed design
- ◎ Bubble-tight shutoff at all reseating pressure
- ◎ Low operating torque
- ◎ Panel mounting available
- ◎ With special cleaning and packaging, applicable to oxygen-enriched environments

Model: BPR-26LZ-300-00-00-Z

Technical Data

- ◎ Maximum control pressure: 1000 psig
- ◎ Pressure control range: 10~300, 10~500 or 10~1000 psig
- ◎ Material of the main components:
  Seat:PCTFE
  Piston: 316L
  O-rings: Viton or Kalrez
- ◎ Temperature: -15°F~+165°F (-26°C~+74°C)
- ◎ Leak rates:
  Internal: Bubble-tight
  External: Bubble-tight
- ◎ Flow coefficient (Cv): 0.3
- ◎ Weight: ≈1.98 lbs (0.9 kg)
- ◎ Body ports: 1/4" female NPT for inlet, outlet and gauge

FPV-1 Series

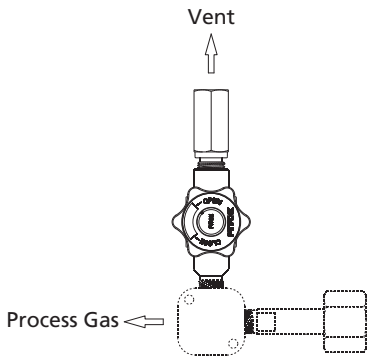
Technical Data

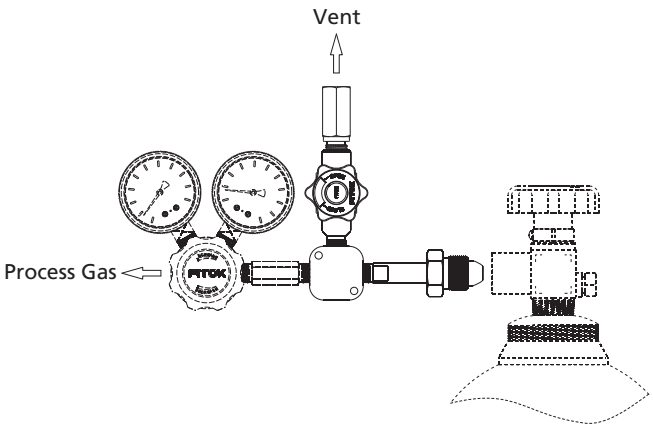
◎ Maximum working pressure: 4500 psig
◎ Material of the main components:
Seat: PCTFE (diaphragm valve)
Diaphragm: Elgiloy (diaphragm valve)
◎ Temperature: -10°F~+150°F (-23°C~+65°C)
◎ Leak rates:
Internal: ⩽1x10^{-9} mbar·l/s helium
External: ⩽1x10^{-9} mbar·l/s helium
◎ Minimum orifice: Φ0.13" (3.2 mm)

Product Types

◎ Straight Purge Assemblies
Connecting the Inlet (auxiliary) port of the regulator or in between the regulator and the cylinder to allow the corrosive or toxic gas to be vented through to a safe location.

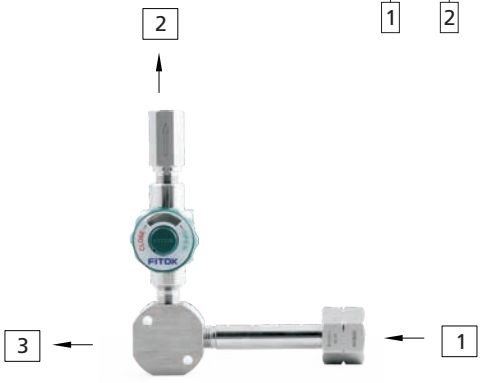
◎ Tee Purge Assemblies
Connecting the cylinder with the regulator, allowing process gas flowing through to purge out the remaining contamination in between the cylinder and the regulator to prevent the high purity gas system from atmospheric contamination.





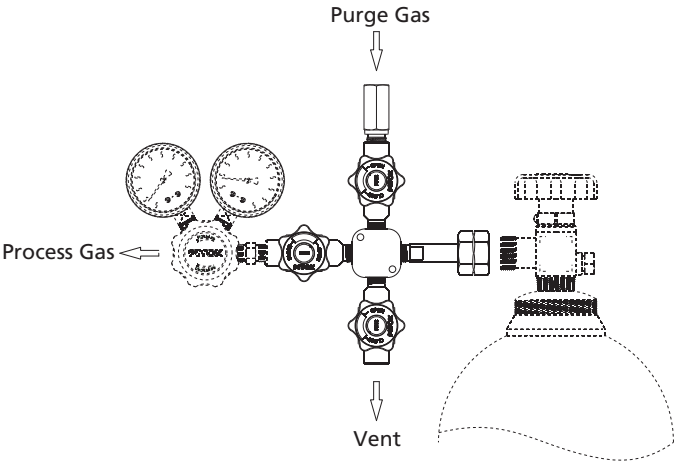
Port Encoding Example: FPV – 1S6L – 01 – 00
1 2

Port Encoding Example: FPV – 1T6L – C580 – 00 – 00
1 2 3



◎ Cross Purge Assemblies

Connecting the cylinder and the regulator with an additional shutoff diaphragm valve to the Tee Purge Assemblies to utilize inert gas from the outside to purge out the contamination in between the cylinder and the regulator.



Port Encoding Example: FPV – 1C6L – DIN6 – 00 – 00 – 00

Diaphragm Valves

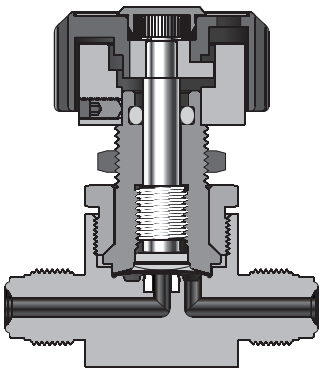
DS Series

Features

- ◎ Reduced inner capacity
- ◎ Packless diaphragm seal design for high purity
- ◎ Minimized number of components
- ◎ Manual and pneumatic actuators available
- ◎ Aluminum piston to increase operation speed

Technical Data

- ◎ Maximum working pressure: 4500 psig
- ◎ Material of the internal components:
  Seat: PCTFE or Vespel
  Diaphragm: Elgiloy
- ◎ Temperature:
  PCTFE: -10°F~+150°F (-23°C~+65°C)
  Vespel: -10°F~+250°F (-23°C~+121°C)
- ◎ Leak rates:
  Internal: ⩽1x10^{-9} mbar·l/s helium
  External: ⩽1x10^{-9} mbar·l/s helium
- ◎ Flow coefficient (Cv): 0.17



Part Number Description

F2	Special Cleaning and Packaging
F3	Ultra High Purity

Seat

	PCTFE
V	Vespel

Ball Valves

BO Series

Features

- One-piece body and one-piece ball stem
- No dead zone, such as in the area between the ball and valve chamber
- In-line inspection and repair with top entry design
- Thermal cycle performance improved and wear compensated by live-loaded design
- Multiple connections available
- Pneumatic and electric actuators available

Technical Data

- Maximum working pressure: 3000 psig (207 bar)
- Temperature: -65°F to 300°F (-54°C to 148°C)
- Seat material: PTFE

Check Valves

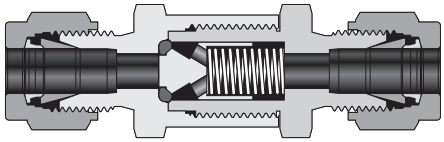
CV, CO and COA Series

Features

- Resilient O-ring seat design for leak-free sealing
- Maximum working pressure: 3000 psig (207 bar)
- Temperature: -10°F to 375°F (-23°C to 190°C)
- PTFE-coated spring available

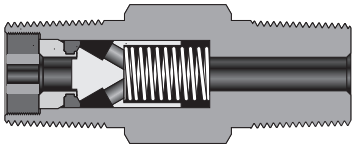
CV Series

- Fixed cracking pressure: 1/3 to 25 psig (0.02 to 1.7 bar)



CO Series

- Compact design with one-piece body
- Fixed cracking pressure: 1/3 to 25 psig (0.02 to 1.7 bar)



COA Series

- Adjustable cracking pressure: 3 to 600 psig (0.02 to 41.4 bar)
- A variety of springs available

Relief Valves

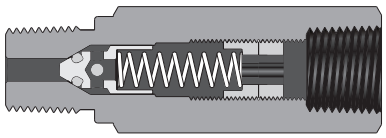
RUV and RV Series

Introduction

Relief valve opens when system pressure exceeds the set pressure, allowing the medium to flow out to relieve the system pressure and closes when the system pressure decreases to the resealing pressure.

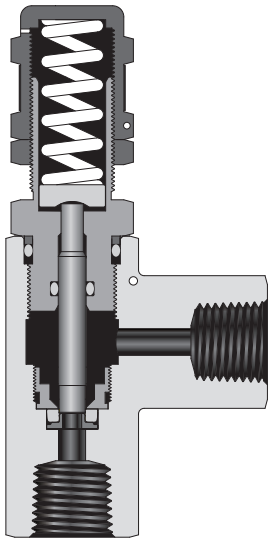
RUV Series

- Compact design with one-piece body
- Standard seat: FKM
- Temperature: -10°F to 300°F (-23°C to 148°C)
- Cracking pressure: 25 to 500 psig (1.7 to 34.5 bar)
- Set pressure by nut adjustment and spring replacement



RV Series

- Working temperature: -10°F to 300°F (-23°C to 148°C)
- Cracking pressure: 50 to 6000 psig
- Adjustable bonnet cap for pressure setting
- Lead-seal line protected



Temperature Range of Sealing Material

O-ring Material	Temperature Range °F (°C)
Fluorocarbon Rubber	25 to 250 (-4 to 121)
Buna-N Rubber	0 to 250 (-17 to 121)
Neoprene Rubber	-10 to 300 (-23 to 148)
Ethylene Propylene Rubber	30 to 250 (-1 to 121)

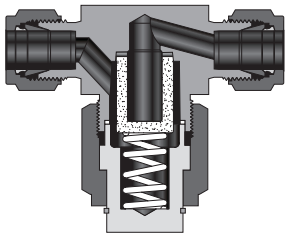
Filters

FT Series

Tee-type Filters

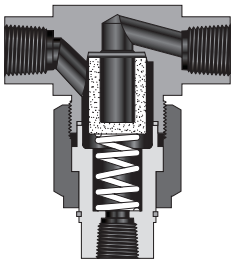
- Maximum working pressure: 6000 psig (414 bar)
- Temperature: -20 °F to 900 °F (-28°C to 482 °C)
- Filter element replaceable without removing body from system



FB Series

Bypass Filters

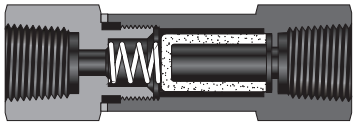
- Maximum working pressure: 6000 psig (414 bar)
- Temperature: -20 °F to 900 °F (-28°C to 482 °C)
- Bypass port at filter bottom for easy sampling and purging



FI Series

In-line Filters

- Maximum working pressure: 3000 psig (207 bar)
- Temperature: -20 °F to 900 °F (-28°C to 482 °C)
- Compact and space-saving design



FW Series

All-welded In-line Filters

- Maximum working pressure: 6000 psig (414 bar)
- Temperature: -20 °F to 900 °F (-28°C to 482 °C)
- Large filtration area and high flow coefficient
- All-welded construction to eliminate leakage

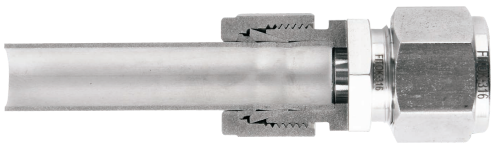
Fittings

Features

- ◎ Sizes ranging from 1/4" to 1/2" and 6 mm to 12 mm
- ◎ Diverse material and configurations available
- ◎ Precision machined components to ensure perfect deformation of the ferrules and tubing
- ◎ Hardened threads with smooth surface finish to avoid galling and to help extend the fitting cycle life
- ◎ Silver-plated female nut threads to reduce friction against the body threads
- ◎ Radius junction design with elbows to provide smooth flow path
- ◎ Every fitting marked with size, material and heat number



Ordering Information and Dimensions

Dimensions are shown with FITOK nuts finger-tight.

Metal Flexible Hoses

MH, MM Series

Features

- Core tube and fitting material: 316 SS
- Overbraid material: 304 SS
- For vacuum and positive pressure applications
- Maximum working pressure: 3100 psig (213 bar)
- Hose size: 1/4" to 1"
- Temperature: -325°F to 800°F (-200°C to 426°C)
- End connections:
  1/8 to 1 thread
  3/16" to 1" and 6 mm to 22 mm tube fitting
- Welded fitting-to-hose construction to ensure reliable seal
- Standard and custom length available

Cylinder Connections

CGA DISS Series B-16

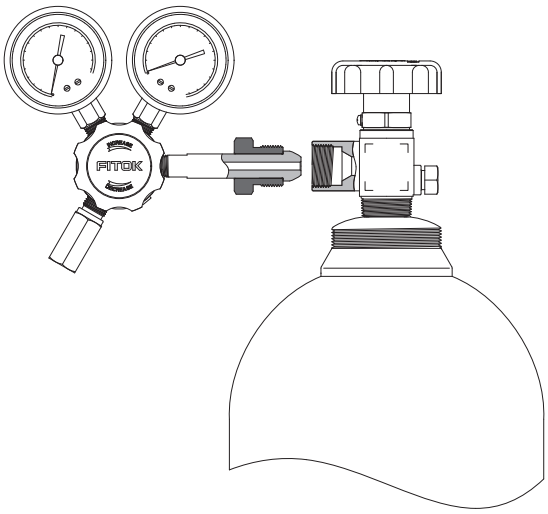
CGA Series B-20

DIN Series B-27

Gas Connection Assignment Table B-28

Features

- ◎ 100% visual inspection of critical surfaces
- ◎ Diverse material and configurations available
- ◎ Silver-plated nut threads to reduce installation torque
- ◎ Every fitting marked with size, material and heat number
- ◎ Cleaned and packaged for Oxygen and Ultra High Purity Service available
- ◎ Customized solutions available



Material

Series	Component	Material	Designator
CGA DISS	Nipples	316L SS	6L
	Nuts	304 SS	S4
	Gaskets	Nickel 200	NI
		PCTFE	K
		Aluminum	AL
	Plugs	316L SS	6L
	Adapters	316L SS	6L
	Caps	316L SS	6L
CGA DIN	Nipples	316L SS	6L
	Nuts	304 SS	S4
	Gaskets	PTFE	T
		PCTFE	K
	Plugs, Caps	316L SS	6L
	Adapters	316L SS	6L

Notes:
1. Nickel gasket heat treated; surface hardness＜HB 100
2. 316L SS in compliance with SEMI F20

Ordering information

- ◎ Add material designator as a prefix to the basic ordering number to get the complete ordering number.
  Example: 6**L**-C634-L-FR4
- ◎ CGA, DIN Series
  PTFE is standard material for gasket. If PCTFE is required, please add a suffix of "-k" to the ordering number.
  Example: 6L-C350-NS4-**K**
- ◎ CGA DISS Series
  Nickel is standard material for gasket. If PCTFE is required, please add a suffix of "-k" to the ordering number.
  Example: 6L-C632-FR4-**K**

CGA DISS Series

- Non-rotating design
- Nipple with TB or FR fitting electropolished with internal surface roughness finished to an average of Ra 9 µin. (0.23 µm)
- Cleaned for Ultra High Purity Service; packaged in a Class 100 clean room
- Test with helium (maximum allowable leak rate: 1 x 10^{-9} mbar·l/s)

Common Terms and Definitions

Inlet Pressure

The pressure of media of gas or liquid on the inlet port of the regulator or valve;
Typical units of measure: psig, bar and MPa.

Outlet Pressure

The pressure of media of gas or liquid on the outlet port of the regulator or valve.

Accuracy

The variation in control pressure which occurs under steady state conditions within the control range of a regulator.

Sensitivity

The ability of a pressure regulator to respond to change in discharge conditions: pressure, flow, temperature, etc.

Flow Coefficient (Cv)

A flow coefficient that is numerically equal to the number of U.S. Gallons of water at 60°F/16°C that will flow through a valve or regulator in one minute when the pressure differential between the inlet and outlet is 1 psi. When gas is used instead of liquid, the equation is modified to account for the use of a compressible fluid. For a regulator, Cv is determined when the regulator is wide open and not regulating. When determining flow performance use actual flow curves.

Leakage - External

The loss of fluid from the external surfaces or joints of a regulator or valve. Example: From the body-bonnet-diaphragm joint. Leakage to atmosphere. The leakage rate is measured in mbar l/s Helium.

Leakage - Internal

The loss of fluid through a regulator or valve, between pressure zones normally expected to be sealed. Example: Between the inlet pressure and the outlet pressure zones.

Load Element

One of the three basic elements of a pressure reducing regulator. It provides the means by which the operator can set the force that determines the control pressure of a regulator. This element includes the spring and the stem.

Sensing Element

One of the three basic elements of a pressure reducing regulator. It senses the changes of the outlet pressure and acts as a physical connection between the load element and control element.

Control Element

One of the three basic elements of a pressure regulator to reduce the high inlet pressure to a stable lower outlet pressure by adjusting the orifice.

Diaphragm

One type of sensing elements, which is sensitive in reacting to outlet pressure change, normally used for gas media. Common material include elastomeric and metallic.

Piston

One type of sensing element. Used in high pressure regulators. Normally with O-ring seals.

Unbalanced Main Valve

Inlet pressure provides the majority of the shutoff force. The function of the main valve is to reduce the high inlet pressure to a lower outlet pressure.

Balanced Valve

A main valve designed to relieve the inlet force loading on the seat.

Venting

When the load pressure is relieved, the vent valve shall be opened by the downstream force to vent the downstream pressure.

Gas Purity Values

Type	Degree	Purity Value	Max. Contamination (ppm)
Pure	2.5	99.5%	5000
	3.0	99.9%	1000
High Purity	3.5	99.95%	500
	4.0	99.99%	100
	4.5	99.995%	50
	5.0	99.999%	10
	5.5	99.9995%	5
	6.0	99.9999%	1.0
Ultra High Purity	7.0	99.99999%	0.1

How to Use the FITOK Flow Chart

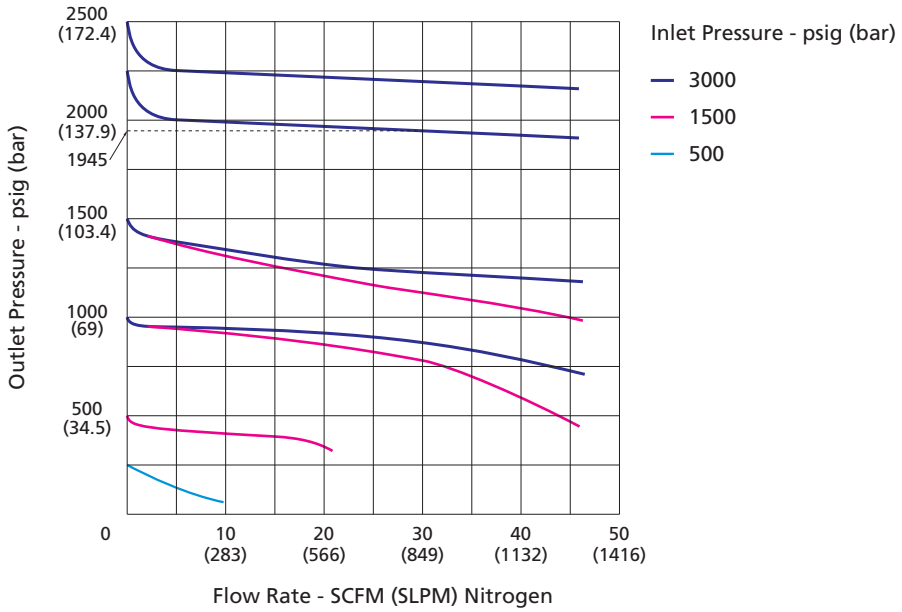
A FITOK Flow Chart is a graphic representation of test results, in curves, showing the changes in outlet pressure of a regulator with the varying flow rate basing on different inlet pressures. The regulator is so designed that at the time the outlet pressure reaches the set pressure, the flow rate would be zero. The inlet pressure is indicated on the right end of each curve.

To use the FITOK Flow Charts, the first step is to select the chart that fits the following:
- Regulator model
- Expected flow range
- Inlet pressure range
- Outlet pressure range

Subsequently, select a curve, if available, plotted for the exact inlet pressure and set pressure of the outlet (zero flow). Locate the set pressure on the vertical axis. Follow the curve until it crosses the vertical line corresponding to the desired flow rate. Read horizontally from the cross point to the vertical axis to locate the actual working pressure for this flow rate. If no curve is plotted for the exact pressure, extrapolate a new curve between and referring to the two closest existing curves.

Example:
Using the flow chart to determine the pressure drop (from the set pressure to the outlet pressure at 30 SCFM condition).
Given Conditions: Inlet pressure=3000 psig, Set pressure=2250 psig
Steps: 1. Locate the set pressure (2250 psig) with zero flow on the vertical axis;
2. Follow the curve until it crosses the vertical line corresponding to 30 SCFM;
3. Read horizontally from the cross point to the vertical axis. The corresponding pressure read is 1945 psig. Therefore, the pressure drop is 305 psig.

Flow Chart



Notes:
1. The performance of regulator is more accurate in the range where the curve is comparatively flat.
2. All test results on the FITOK Flow Charts are based on utilization of Nitrogen as a medium in standard testing conditions. Please contact FITOK for additional information.

Ordering Details for Specialty Gas Equipment

Company _____

Name _____

Tel _____

E-mail _____

Application Information

Gas _____ Chemical formula _____ Purity _____

Upstream pressure _____ psig, _____ bar, _____ Mpa

Downstream pressure range _____ psig, _____ bar, _____ Mpa

Temperature _____°C _____°F Cv or flow rate _____

Application _____

_____

Pressure Regulator Data

Single-stage ☐ Dual-stage ☐

Material (mostly gas type dependent): Stainless Steel ☐ Brass ☐ Hastelloy ☐

◎ Cylinder pressure regulator ☐

Cylinder connection Yes ☐ No ☐

Purge unit Yes ☐ No ☐

◎ Panel and line pressure regulator ☐

2 ports ☐ 3 ports ☐ 4 ports ☐

◎ Pressure control panel ☐

Purge unit Yes ☐ No ☐

◎ Changeover system ☐

With line regulator Yes ☐ No ☐

◎ Point-of-use panel ☐

Warranty Information

FITOK products are backed by The FITOK Limited Lifetime Warranty. For a copy, contact FITOK Group or our authorized distributors.
